AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions, and listings, of claims in the application:

LISTING OF CLAIMS:

(Original) An absorbent article comprising:
an absorbent body,

a liquid-permeable covering layer arranged over a first surface on the absorbent body, and

a liquid-permeable liquid-transfer layer arranged between the absorbent body and the liquid-permeable covering layer,

wherein the liquid-permeable covering layer comprises a nonwoven material with a pore volume distribution curve with a maximum at a pore radius greater than or equal to 50 µm and with a wetting angle of at least 120°, and

wherein the liquid-transfer layer comprises a fibrous layer with a pore volume distribution curve with a maximum at a pore radius of from 105 to 325 μm .

- 2. (Original) The absorbent article according to Claim 1, wherein the liquid-permeable covering layer has a pore volume distribution curve with a maximum at a pore radius greater than or equal to 55 μm.
- 3. (Original) The absorbent article according to Claim 2, wherein the liquid-permeable covering layer has a pore volume distribution curve with a maximum at a pore radius of from 55 μ m to 60 μ m.

- 4. (Original) The absorbent article according to Claim 1, wherein the liquid-permeable covering layer comprises fibers with a fiber fineness of at least 5 dtex.
- 5. (Original) The absorbent article according to Claim 1, wherein the liquid-permeable covering layer has a basis weight of at most 15 g/m².
- 6. (Original) The absorbent article according to Claim 1, wherein the liquid-permeable covering layer comprises a spunbond nonwoven.
- 7. (Original) The absorbent article according to Claim 1, wherein the liquid-transfer layer comprises a polyester wadding bonded with a binding agent.
- 8. (Original) The absorbent article according to Claim 1, wherein the liquid-transfer layer has a pore volume distribution curve with a maximum at a pore radius of from 115 μ m to 185 μ m.
- 9. (Original) The absorbent article according to Claim 8, wherein the liquid-transfer layer has a pore volume distribution curve with a maximum at a pore radius of from 135 μ m to 155 μ m.

- 10. (Original) The absorbent article according to Claim 1, wherein the liquid-transfer layer has a cumulative pore volume in the pore size range of from 110 to 350 μ m which is more than 60% of the total pore volume.
- 11. (Original) The absorbent article according to Claim 10, wherein the liquid-transfer layer has a cumulative pore volume in the pore size range of from 120 to 230 μm which is more than 40% of the total pore volume.
- 12. (Original) The absorbent article according to Claim 11, wherein the liquid-transfer layer has a cumulative pore volume in the pore size range of from 150 to 180 µm which is more than 15% of the total pore volume.
- 13. (Original) The absorbent article according to Claim 1, wherein the liquid-transfer layer comprises fibers with a fiber fineness of from 6.7 to 11 dtex.
- 14. (Original) The absorbent article according to Claim 1, wherein the liquid-transfer layer has a basis weight of from 10 gsm to 100 gsm, and a bulk of at least 15 cm³/g measured at a load of 0.1 kPa.
- 15. (Original) The absorbent article according to Claim 1, wherein the liquid-transfer layer has a pore volume distribution curve with a maximum located at from 155 μ m to 165 μ m in combination with a cumulative liquid volume of 0.1 mm³/mg of sample or more in pores with radii smaller than or equal to 25 μ m.

Attorney's Docket No. 1018798-000224 Application No. 10/788,446 Page 5

- 16. (Original) The absorbent article according to Claim 1, wherein the article comprises a liquid-impermeable covering layer located over a second surface on the absorbent body opposite the first surface, and in that the liquid-permeable covering layer and the liquid-impermeable covering layer together enclose the absorbent body.
- 17. (Previously Presented) The absorbent article according to Claim 1, wherein the first surface on the absorbent body defines a user-facing surface.
- 18. (Previously Presented) The absorbent article according to Claim 1, wherein the liquid-permeable liquid-transfer layer is arranged immediately adjacent to the absorbent body.
- 19. (Previously Presented) The absorbent article according to Claim 1, wherein the absorbent body comprises one or more layers of material.
- 20. (Newly Added) The absorbent article according to Claim 1, wherein the liquid-permeable liquid-transfer layer is arranged immediately adjacent to the first surface of the absorbent body.
